

Louis Harvey
May 20, 2005

This short note is being written as a testimonial about my use of the lap table.

To begin with, I have bi-lateral carpal tunnel, right elbow surgery, and a condition in both palms of my hands which, over a period of time, causes the fingers to steadily contract towards the palm.

Prior to using the lap table; the afore mentioned ailments hampered my learning and performance in this computer course. The lap table allows me to adjust and adapt my situation, which allows me to greatly increase my learning and performance. It is evident to me, that without the lap table I would have been unable to function and complete this computer course.

Sincerely,

Louis Harvey
